

the 1990s, the number of people with a disability in the United States has increased by 25% (U.S. Census Bureau, 2000).

As a result of the increase in the number of people with disabilities, the need for accessible information has become more acute. The Americans with Disabilities Act (ADA) of 1990 (42 U.S.C. 12101) was enacted to ensure that people with disabilities have the same opportunities as people without disabilities to participate in all aspects of society.

The ADA requires that information and communication be accessible to people with disabilities. This includes the provision of accessible information and communication for people with disabilities in the workplace, in education, in public accommodations, and in government services. The ADA also requires that information and communication be accessible to people with disabilities in the home.

The ADA has led to the development of many accessible information and communication technologies. These technologies include accessible web pages, accessible e-mail, accessible video, and accessible audio. These technologies have made it possible for people with disabilities to participate in all aspects of society.

However, there are still many people with disabilities who are unable to access information and communication. This is often due to a lack of accessible information and communication technologies. This is often due to a lack of accessible information and communication technologies.

One of the main reasons for this is that many people with disabilities do not have the resources to purchase accessible information and communication technologies. This is often due to a lack of accessible information and communication technologies.

Another reason for this is that many people with disabilities do not have the skills to use accessible information and communication technologies. This is often due to a lack of accessible information and communication technologies.

There are many ways to address these issues. One way is to provide accessible information and communication technologies to people with disabilities. This can be done through a variety of methods, including providing accessible information and communication technologies to people with disabilities.

Another way to address these issues is to provide training to people with disabilities on how to use accessible information and communication technologies. This can be done through a variety of methods, including providing training to people with disabilities on how to use accessible information and communication technologies.

There are many other ways to address these issues. One way is to provide accessible information and communication technologies to people with disabilities.
